Recent Water Quality Results

Updated: 1-Jul-22

| Parameter | Description | Acceptable Range |
|--------------------|---|---|
| Turbidity | Suspended matter that interferes with the clarity of the water. While not a health concern itself, turbidity is an indicator of possible contamination. | There are no regulations for distribution system turbidity; water system operators aim for less than 1.0 NTU. |
| Total Chlorine | Used to monitor the level of disinfectant used to inactivate microorganisms such as bacteria and viruses. | There are no regulations for distribution system total chlorine; system operators aim to maintain 0.2 - 2.2 ppm. As long as there are no total coliforms, lower values are not a concern. Higher values are not deemed a health concern unless they exceed the World Health Organization's recommended limit of 5ppm. |
| Total Coliforms | A group of bacteria that generally do not cause human disease, but their presence in water may indicate possible contamination. | The BC Drinking Water Act stipulates that no more than 10% of samples during a 30-day period may be positive for Total Coliforms and that no single sample may contain more than 10 counts. |
| E. Coli | A member of the Total Coliform group and its presence in water indicates contamination. | The BC Drinking Water Act stipulates that no E.Coli should be detected in drinking water. |
